# Make a Ten

Prompt your child to see if they can make a ten by taking some from one number and giving to the other number. Draw an arrow to show the movement of the circles from one number to the other. Cross out the amount they are "taking" from one number and draw it in the ten frame of the number they are "giving" to.
Example:

8 + 4

$8 + 4 \longrightarrow 8 + 2 = 10 \longrightarrow 10 + 2 = \boxed{12}$

$2 \quad 2$

(1) **9 + 3**

(2) **7 + 5**

(3) **8 + 3**
